Subject index

Adenylyl-(3′,5′)-guanosine
Differential pulse polarographic determination of adenylyl-(3′,5′)-guanosine and the effect of some transition metal ions (Kamal) 145

Alanine
Surface electrochemistry of the oxidation reactions of α- and β-alanine at a platinum electrode (Marangoni et al.) 269

Albumin
Analysis and physical significancy of the kinetic parameters associated with albumin adsorption onto glassy carbon obtained by electrochemical impedance measurements (Caprani, Lacour) 241

Amino acids
One-electron reduction of excited NMN^+ and $NADP^+$ in the presence of amino acids (Pawlicki et al.) 371

Amino oxidase
Amino oxidase amperometric biosensor for polyamines (Gasparini et al.) 307

Amperometric biosensor
Amino oxidase amperometric biosensor for polyamines (Gasparini et al.) 307

Ascorbic acid
Polarographic behaviour of the 3,4-endiol form of 2,3-diketogulono-δ-lactone formed from L-ascorbic acid in neutral buffer solutions (Takagi et al.) 121

Black lipid membranes
The transversal diffusion coefficient of phospholipid molecules through black lipid membranes (Popescu, Victor) 105

Blood
Interrelation between the blood redox potential and exercise induced variations of the biochemical characteristics of blood (Bernard et al.) 45

Cadmium
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155

Calcium
Low-frequency electromagnetic pulses enhance Ca^{2+} uptake by chick small intestine in vitro (Klavinsh et al.) 437

Catharanthus roseus
Energetics of OH^- or H^+ dependent nitrate uptake by *Catharanthus roseus* cells: electrophysiological effects (Rona et al.) 213

Cole–Cole α
To what extent is the magnitude of the Cole–Cole α of the β-dielectric dispersion of cell suspensions explicable in terms of the cell size distribution? (Markx et al.) 195

Copper
The electrochemical behaviour of copper proteins using differential pulse polarography (Studničkova et al.) 109

Cyclic voltammetry
Spectroelectrochemical titrations and cyclic voltammetry of methyl pheophorbide in acid possible role of pheophytin enol iminium in the primary process of PS II (Kovacic et al.) 415

Cytochrome *c*
Reduction of cytochrome *c* at a lipid bilayer modified electrode (Salamon, Tollin) 447

β-Dielectric dispersion
To what extent is the magnitude of the Cole–Cole α of the β-dielectric dispersion of cell suspensions explicable in terms of the cell size distribution? (Markx et al.) 195

Dielectric properties
Dual-frequency excitation: a novel method for probing the nonlinear dielectric proper-

ties of biological systems, and its application to suspensions of *S. cerevisiae* (Woodward, Kell) 395

Diffusion
The transversal diffusion coefficient of phospholipid molecules through black lipid membranes (Popescu, Victor) 105

Dihydrolipoamide dehydrogenase
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425

Diketogulonolactone
Polarographic behaviour of the 3,4-endiol form of 2,3-diketogulono-δ-lactone formed from L-ascorbic acid in neutral buffer solutions (Takagi et al.) 121

Discharge kinetics
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155

DNA
Electroporation as a tool for studying cell proliferation and DNA synthesis in human cultured cells grown in monolayers (Kwee, Celis) 325

Dual-frequency excitation
Dual-frequency excitation: a novel method for probing the nonlinear dielectric properties of biological systems, and its application to suspensions of *S. cerevisiae* (Woodward, Kell) 395

Electric fields
Biological interactions of extremely-low-frequency electric and magnetic fields (Review) (Tenforde) 1
Electric field-induced hybridomas: targeting by immunological and physical methods (Blancher et al.) 295
Influence of the physiological state on the electric field mediated transformation efficiency of intact mycobacterial cells (Katenkamp et al.) 285
Orientation of pea chloroplast in an ac electric field (Hsu) 31

Electromagnetic fields
Augmented transcription by electromagnetic field exposure: the experimental technique affects the measured transient response (Montrose et al.) 383
Direct electric field effects and sequential processes in biosystems (Astumian, Berg) 455
Low-frequency electromagnetic pulses enhance Ca^{2+} uptake by chick small intestine in vitro (Klavinsh et al.) 437
Transcription and translation in cells exposed to extremely low frequency electromagnetic fields (Review) (Goodman, Shirley-Henderson) 335

Electron transfer
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425

Electrophoresis
Electrophoresis in plant cell organelles (Levengood) 225

Electroporation
Electroporation as a tool for studying cell proliferation and DNA synthesis in human cultured cells grown in monolayers (Kwee, Celis) 325
Electroporation: a unified, quantitative theory of reversible electrical breakdown and mechanical rupture in artificial planar bilayer membranes (Barnett, Weaver) 163

Escherichia coli
Electrotransformation of *Saccharomyces cerevisiae* protoplast by a plasmid of *Escherichia coli* (Zhang) 259

Eukaryotic gene expression
The electrical properties of the nuclear envelope, and their possible role in the regulation of eukaryotic gene expression (Review) (Matzke, Matzke) 357

Exercise
Interrelation between the blood redox potential and exercise induced variations of the biochemical characteristics of blood (Bernard et al.) 45

Glassy carbon
Analysis and physical significancy of the kinetic parameters associated with albumin adsorption onto glassy carbon obtained by

electrochemical impedance measurements (Caprani, Lacour) 241
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425

Hybridomas
Electric field-induced hybridomas: targeting by immunological and physical methods (Blancher et al.) 295
L-Hydroxyproline
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155

Immobilised enzymes
A solid-state immobilised enzyme polymer membrane microelectrode for measuring lactate-ion concentration (Dubinin et al.) 131
Immobilised mediators
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425
Impedance
Analysis and physical significancy of the kinetic parameters associated with albumin adsorption onto glassy carbon obtained by electrochemical impedance measurements (Caprani, Lacour) 241
Induction
Electroinduction of interferon-like proteins (Pretnar et al.) 183
Interferon
Electroinduction of interferon-like proteins (Pretnar et al.) 183

Kinetic parameters
Analysis and physical significancy of the kinetic parameters associated with albumin adsorption onto glassy carbon obtained by electrochemical impedance measurements (Caprani, Lacour) 241

Lactate
A solid-state immobilised enzyme polymer membrane microelectrode for measuring lactate-ion concentration (Dubinin et al.) 131
Lactones
Polarographic behaviour of the 3,4-endiol form of 2,3-diketogulono-δ-lactone formed from L-ascorbic acid in neutral buffer solutions (Takagi et al.) 121
Lipid bilayer
Reduction of cytochrome *c* at a lipid bilayer modified electrode (Salamon, Tollin) 447

Magnetic fields
Biological interactions of extremely-low-frequency electric and magnetic fields (Review) (Tenforde) 1
Membranes
Electrochemical theory of the transfer of proton across a biological membrane facilitated by weak acid uncouplers added to the medium (Ohkouchi et al.) 81
Electroporation: a unified, quantitative theory of reversible electrical breakdown and mechanical rupture in artificial planar bilayer membranes (Barnett, Weaver) 163
A model for the appearance of statistical pores in membranes due to self oscillations (Popescu et al.) 91 (err. 476)
A solid-state immobilised enzyme polymer membrane microelectrode for measuring lactate-ion concentration (Dubinin et al.) 131
Spontaneous assembly of bilayer membranes on a solid surface (Martynski, Tien) 317
The transversal diffusion coefficient of phospholipid molecules through black lipid membranes (Popescu, Victor) 105
Mercury
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155
Studies on the surface orientation of uracil, uridine, thymine and thymidine at the mercury electrode surface by electrocapillary measurements (Kamal et al.) 137
Microbial sensors
Biochemical fundamentals and improvement of the selectivity of microbial sensors – a minireview (Riedel) 19

Microelectrode
A solid-state immobilised enzyme polymer membrane microelectrode for measuring lactate-ion concentration (Dubinin et al.) 131
Mycobacterial cells
Influence of the physiological state on the electric field mediated transformation efficiency of intact mycobacterial cells (Katenkamp et al.) 285

$NADP^+$
One-electron reduction of excited NMN^+ and $NADP^+$ in the presence of amino acids (Pawlicki et al.) 371
Nitrate uptake
Energetics of OH^- or H^+ dependent nitrate uptake by *Catharanthus roseus* cells: electrophysiological effects (Rona et al.) 213
NMN^+
One-electron reduction of excited NMN^+ and $NADP^+$ in the presence of amino acids (Pawlicki et al.) 371
Nuclear envelope
The electrical properties of the nuclear envelope, and their possible role in the regulation of eukaryotic gene expression (Review) (Matzke, Matzke) 357

Organelles
Electrophoresis in plant cell organelles (Levengood) 225
Organic/aqueous interface
Electrochemical study of the transfer of uncouplers across the organic/aqueous interface (Ohkouchi et al.) 71
Oscillations
A model for the appearance of statistical pores in membranes due to self oscillations (Popescu et al.) 91 (err. 476)

Pea chloroplast
Orientation of pea chloroplast in an ac electric field (Hsu) 31
Pheophorbide
Spectroelectrochemical titrations and cyclic voltammetry of methyl pheophorbide in acid possible role of pheophytin enol iminium in the primary process of PS II (Kovacic et al.) 415
Pheophytin enol iminium
Spectroelectrochemical titrations and cyclic voltammetry of methyl pheophorbide in acid possible role of pheophytin enol iminium in the primary process of PS 11 (Kovacic et al.) 415
Phospholipid
The transversal diffusion coefficient of phospholipid molecules through black lipid membranes (Popescu, Victor) 105
Plasmid
Electrotransformation of *Saccharomyces cerevisiae* protoplast by a plasmid of *Escherichia coli* (Zhang) 259
Platinum
Surface electrochemistry of the oxidation reactions of α- and β-alanine at a platinum electrode (Marangoni et al.) 269
Polarography
Differential pulse polarographic determination of adenylyl-(3′,5′)-guanosine and the effect of some transition metal ions (Kamal) 145
Polarographic behaviour of the 3,4-endiol form of 2,3-diketogulono-δ-lactone formed from L-ascorbic acid in neutral buffer solutions (Takagi et al.) 121
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155
The electrochemical behaviour of copper proteins using differential pulse polarography (Studnickova et al.) 109
Polyamines
Amino oxidase amperometric biosensor for polyamines (Gasparini et al.) 307
Pores
A model for the appearance of statistical pores in membranes due to self oscillations (Popescu et al.) 91 (err. 476)
Proliferation
Electroporation as a tool for studying cell proliferation and DNA synthesis in human cultured cells grown in monolayers (Kwee, Celis) 325
L-Proline
Polarographic investigation of the discharge kinetics of cadmium(II) at the dropping mercury electrode (DME) in the presence of L-hydroxyproline and L-proline (Inamul-Haq) 155

Proteins
The electrochemical behaviour of copper proteins using differential pulse polarography (Studničkova et al.) 109
Proton transfer
Electrochemical theory of the transfer of proton across a biological membrane facilitated by weak acid uncouplers added to the medium (Ohkouchi et al.) 81
Protoplast
Electrotransformation of *Saccharomyces cerevisiae* protoplast by a plasmid of *Escherichia coli* (Zhang) 259
PS II
Spectroelectrochemical titrations and cyclic voltammetry of methyl pheophorbide in acid possible role of pheophytin enol iminium in the primary process of PS II (Kovacic et al.) 415
Pyridine nucleotide oxidoreductase
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425

Reviews
Biochemical fundamentals and improvement of the selectivity of microbial sensors – a minireview (Riedel) 19
Biological interactions of extremely-low-frequency electric and magnetic fields (Review) (Tenforde) 1
The electrical properties of the nuclear envelope, and their possible role in the regulation of eukaryotic gene expression (Review) (Matzke, Matzke) 357
Transcription and translation in cells exposed to extremely low frequency electromagnetic fields (Review) (Goodman, Shirley-Henderson) 335

Saccharomyces cerevisiae
Dual-frequency excitation: a novel method for probing the nonlinear dielectric properties of biological systems, and its application to suspensions of *S. cerevisiae* (Woodward, Kell) 395
Electrotransformation of *Saccharomyces cerevisiae* protoplast by a plasmid of *Escherichia coli* (Zhang) 259
Selectivity
Biochemical fundamentals and improvement of the selectivity of microbial sensors – a minireview (Riedel) 19
Small intestine
Low-frequency electromagnetic pulses enhance Ca^{2+} uptake by chick small intestine in vitro (Klavinsh et al.) 437
Solid surfaces
Spontaneous assembly of bilayer membranes on a solid surface (Martynski, Tien) 317
Spectroelectrochemical titrations
Spectroelectrochemical titrations and cyclic voltammetry of methyl pheophorbide in acid possible role of pheophytin enol iminium in the primary process of PS II (Kovacic et al.) 415

Thymidine
Studies on the surface orientation of uracil, uridine, thymine and thymidine at the mercury electrode surface by electrocapillary measurements (Kamal et al.) 137
Thymine
Studies on the surface orientation of uracil, uridine, thymine and thymidine at the mercury electrode surface by electrocapillary measurements (Kamal et al.) 137
Transcription
Augmented transcription by electromagnetic field exposure: the experimental technique affects the measured transient response (Montrose et al.) 383
Transcription and translation in cells exposed to extremely low frequency electromagnetic fields (Review) (Goodman, Shirley-Henderson) 335
Transient response
Augmented transcription by electromagnetic field exposure: the experimental technique affects the measured transient response (Montrose et al.) 383
Transition metals
Differential pulse polarographic determination of adenylyl-(3′,5′)-guanosine and the effect of some transition metal ions (Kamal) 145
Translation
Transcription and translation in cells exposed to extremely low frequency electromagnetic fields (Review) (Goodman, Shirley-Henderson) 335

Uncouplers
Electrochemical study of the transfer of uncouplers across the organic/aqueous interface (Ohkouchi et al.) 71
Electrochemical theory of the transfer of proton across a biological membrane facilitated by weak acid uncouplers added to the medium (Ohkouchi et al.) 81
Uracil
Studies on the surface orientation of uracil, uridine, thymine and thymidine at the mercury electrode surface by electrocapillary measurements (Kamal et al.) 137
Uridine
Studies on the surface orientation of uracil, uridine, thymine and thymidine at the mercury electrode surface by electrocapillary measurements (Kamal et al.) 137
Viologen
Direct electron transfer from modified glassy carbon electrodes carrying covalently immobilised mediators to a dissolved viologen accepting pyridine nucleotide oxidoreductase and dihydrolipoamide dehydrogenase (Paxinos et al.) 425
